

ANASTASIA

L.T. - Olds. Thursday, Nov-5, 1960.

From the Black Forest of West Germany, comes a familiar claim - "I am Anastasia." Mrs. Anna Anderson insists that she really is - the daughter of Czar Nicholas the Second. ^{In this} She is supported ~~in her claim~~ by a handwriting expert - who says that Mrs. Anderson's Russian script is identical with Anastasia's.

The Bolshviks, as we know, shot the Czar and his family in a basement at Ekaterinburg - now Sverdlovsk. But shortly afterward the rumor began - that Anastasia had survived. We heard that ~~she had been~~ ^{she had been} only wounded, ~~then~~ rescued - by faithful retainers, And spirited - to the West.

Several women have claimed to be - the Russian Princess. All the claimants - considered dubious. Even Mrs. Anderson is being taken skeptically by a German court - despite her handwriting expert. Her critics insist her real name is - Franziska Shanzkowski.

Or could she really be the last of the Romanoffs - Princess Anastasia, daughter of the Czar of ~~the~~ all the Russias?.

MOTORAMA

Today President Eisenhower remarked - "You know, I haven't had a driver's license for thirty-eight years." The occasion of the remark - President Eisenhower's visit to the General Motors exhibit, "Motorama." He stopped off at the Waldorf - and was escorted through the show by G.M. Chairman, Frederick Donner, ^{and Pres. Jack Gordon.} The President stopped at one sports wagon model - and ^{noted} ~~commented~~ that he could use something like it on his Gettysburg farm. Then he added his comment about needing a driver's license - because he hasn't had one for thirty-eight years.

~~As a~~ Young Captain, Ike Eisenhower did his own driving. After that, he traveled in command cars - equipped with military chauffeurs. ^{Now, Dick, maybe he'll} ~~Now suggesting that he might~~ get back to it - in retirement, down on the farm.

NOBEL

This year's Nobel Prize for Chemistry was decided by -
a bottle of beer. Professor Donald Glaser of ~~U.C.S.A.~~ ^{THE UNIV. OF CALIF. BERKELEY} started
his experiments with this question - "Why does a bottle of
beer foam when it's opened?" The Professor got himself half
a dozen bottles - and began to experiment. His conclusion -
beer foams because it is bombarded by particles in the
atmosphere. He followed up his theory - and invented - his
"bubble chamber." A device that scientists use to photograph
atoms - as they smash into one another.

This year's Nobel Prize for Physics doesn't have -
so amusing a beginning. But it's dramatic enough. Professor
Willard Libby, ~~of~~ of U.C.L.A., developed a scientific method -
for dating objects from the distant past. The famous - carbon
method. Professor Libby discovered ^{that} ~~the~~ carbon disintegrates at
a slow steady rate - over the centuries. Hence the remaining
amount can be precisely dated - to show just when the process
began. It was the Libby carbon method that fixed the age of
the Dead Sea Scrolls - at two thousand years.

TIMOSHENKO

Here's a name that was in headlines - during World War Two. The name - Timoshenko. Marshal Semyon Timoshenko, who became a Russian hero when he stopped the Nazis before Moscow in Nineteen Forty-One. He held the northern front ~~what~~ while Hitler's legions broke through in the south - and drove to ultimate defeat at Stalingrad.

Timoshenko is back in the news - as Khrushchev's latest victim. The illustrious Marshal has been removed from his command - which ^{now} goes to one of Khrushchev's friends.

^{So} The conqueror of World War Two, ~~not~~ ⁵ ~~joining~~ Marshal Zhukov - in obscurity. The Soviet Union once resounded with those names - Timoshenko and Zhukov. But the two Marshals - got in Khrushchev's way. Hence their fate - ~~retirement at Khrushchev's suggestion.~~
retirement at Khrushchev's suggestion.

CYCLONE

capital of east
A dispatch from Dacca, Pakistan, indicates the fury of

the cyclone - that hit the coast at Chittagong on Monday.

Sixteen ocean-going ships - were torn from their moorings, and tossed around like sailboats. Four were blown seven miles - up the Karnaphuli River. Several others - scudded out to sea. The rest, left high and dry on sandbars.

The tidal wave that broke over the Chittagong coast - flattened hundreds of houses, and left an estimated toll of - *four* thousand dead, *and* ~~several~~ thousand injured. A detachment of the Pakistan army has moved in - to supervise rescue operations.

CONGO

Dag Hammarskjold's report on the Congo - is a blunt criticism of Belgium. The Secretary General, saying that Brussels had no right to allow Belgians - back into the Congo. And charging that the Belgians have hampered the U.N. - in its Congo operations. Leading to the threat of a major war - through unilateral intervention of the great powers.

CUBA

In Havana, the official phrasing has changed - somewhat. A couple of days ago Castro's favorite phrase was - "imminent invasion." Now he seems to prefer - "if invasion comes." That is, the Cuban dictator has climbed down - after his ludicrous charge that an American attack on Cuba might be launched at any moment.

Meanwhile, the latest Havana rumor is that Red Chinese pilots have arrived - to train Cubans in handling Soviet Migs. There's no word on why Castro should have chosen Mao Tse-tung's "technicians" - instead of Khrushchev's.

NIXON

Today was in Texas
Vice-President Nixon made a foray below the
Mason-Dixon Line today - in a bid to break the Democratic
hold on the Solid South. He has been receiving
his adversary
enthusiastic reports - from GOP leaders in Dixie, who
insist that this is the year they have a good chance to
win.

Tonight Nixon is in Texas - trying to throw a
lasso over Lyndon Johnson's home state.

The GOP
In Arizona, the Democratic candidate took a verbal
punch at - Senator Barry Goldwater, Arizona, accusing
Goldwater for saying - that Arizona is in the bag for
said Jack Kennedy - "It's in the bag, like it was for the
New York Yankees."

KENNEDY

Senator Kennedy ~~took off his kid gloves today~~ ^{today was on} in a ~~whistle stop~~ tour through Arizona, New Mexico and Texas. The Democratic candidate opened the roughest phase of his campaign by speaking of ^{his adversary} ~~Nixon~~ in such terms as - "boondoggle, blackmail." The subject - farm policy. The Nixon plan to use surplus crops is, in Kennedy's words - "a boondoggle, plainly manufactured on Madison Avenue." The Republican candidate is now falling back on "threats to the farmer" - according to Kennedy.

In Arizona, the Democratic candidate took a verbal punch at - Senator Barry Goldwater. ~~Kennedy~~, deriding Goldwater for saying - that Arizona is in the bag for ^{the S.A.P.} ~~Nixon~~. Said ~~Jack~~ Kennedy - "It's in the bag, like it was for the New York Yankees." ~~A safe remark. There aren't too many Yankee fans in Arizona.~~

EISENHOWER

President Eisenhower is described as - "optimistic" about his invasion of New York. Our chief executive, feeling he did his bit - to swing votes into the Nixon-Lodge column.

In fact he enjoyed it so much
~~He feels he did so well~~ that he intends to get ~~right~~ back

into the campaign tomorrow - with a swing into Cleveland and Pittsburgh. His object is still - the undecided voter;

~~The~~ independent who, in the opinion of both parties - will be decisive in this election.

There ~~is~~ ^{is} no word from the White House - about a

forthcoming trip to Paris. But diplomatic sources in London

predict - the American chief of state will appear in person at *the* next

~~the~~ ^{the} Nato Council meeting. President Eisenhower has been a

strong supporter of Nato - ever since he commanded the

international army. Besides, he's being urged to attend by

our allies - because of his immense prestige. So the

prediction is - Dwight Eisenhower, to say farewell to Nato,

in person.

SATELLITE

Thurs. Nov. 3 - 60.

Explorer Eight - is a scientist's dream. So say - the scientists at Cape Canaveral. Referring to the artificial satellite - they put into orbit today.

Explorer Eight weighs - only ninety pounds. But it's a scientist's dream - because it has eight mechanical brains. Equipment to send back different reports - on the "atomic roof" of the world, The ionosphere that begins fifty miles up - and extends hundreds of miles into space.

A ^{Juno}~~Jupiter~~ four-stage rocket carried the Explorer Eight into orbit - in just eight minutes. Tonight, this latest of our satellites is circling our planet - every two hours. Sometimes within three hundred miles of us - then zooming out for more than a thousand miles. All the time, chattering away - in mathematical symbols, telling us what it feels like to be out there - in the ionosphere. - *if you can read the mathematical symbols.*
